

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for rendering a frame of animation ~~comprises~~
in a computer system having a computer memory, the method comprising:

retrieving scene descriptor data associated with the frame of animation, wherein
the scene descriptor data includes a first specification of at least one object, wherein the first
specification of the object is associated with a first rendering option;

receiving a selection of the first rendering option or a second rendering option;

querying a database external to the computer system for a first representation of
the one object in response to the first specification of the object when the selection is of the first
rendering option;

receiving the first representation of the object from the database external to the
computer system when the selection is of the first rendering option;

loading the first representation of the object into the computer memory when the
selection is of the first rendering option; and

rendering the object for the frame of animation using the first representation of
the object when the selection is of the first rendering option;

wherein the first representation of the object is not loaded into the computer
memory when the selection is of the second rendering option.

2. (Currently Amended) The method of claim 1

wherein the scene descriptor data includes a second specification of the object,
wherein the second specification of the object is associated with ~~[[a]]~~ the second rendering
option;

querying [[a]] the database external to the computer system for a second representation of the one object in response to the second specification of the object when the selection is of the second rendering option;

loading the second representation of the object into the computer memory when the selection is of the second rendering option; and

rendering the object for the frame of animation using the second representation of the object when the selection is of the second rendering option;

wherein the second representation of the object is not loaded into the computer memory when the selection is of the first rendering option.

3. (Original) The method of claim 1

wherein the one object comprises a geometric object; and wherein the first representation of the object comprises a geometric description of the geometric object.

4. (Previously Presented) The method of claim 1

wherein the one object comprises a camera object; and

wherein the first representation of the camera object comprises data selected from the group consisting of: camera field of view, camera position, camera orientation, camera aspect ratio.

5. (Previously Presented) The method of claim 1

wherein the one object comprises a light object; and

wherein the first representation of the light object comprises data selected from the group consisting of: type of light source, light color, light source, light quality, light shape.

6. (Previously Presented) The method of claim 1 wherein querying the database

comprises:

providing to an asset management system the first specification of the object; and receiving a location of the first representation of the one object from the asset

management system.

7. (Original) The method of claim 1 further comprising:
storing the frame of animation; and
displaying the frame of animation.

8. (Currently Amended) A method for rendering a frame of animation ~~comprises~~
in a computer system having a computer memory, the method comprising:

retrieving scene descriptor data associated with the frame of animation, wherein
the scene descriptor data specifies at least one object, wherein the object is associated with a
reference to a first representation of the object, and the object is associated with a reference to a
second representation of the object, wherein the first representation of the object is associated
with a first rendering option, and the second representation of the object is associated with a
second rendering option;

receiving a selection of the first rendering option or a second rendering option;

querying a database external to the computer system for the first representation of
the object when the selection is of the first rendering option;

receiving the first representation of the object from the database external to the
computer system when the selection is of the first rendering option;

loading the first representation of the object into the computer memory when the
selection is of the first rendering option; and

rendering the object for the frame of animation using the first representation of
the object when the selection is of the first rendering option;

wherein the first representation of the object is not loaded into the computer
memory when the selection is of the second rendering option;

wherein the first representation of the object comprises references to
representations of a first plurality of objects;

wherein the second representation of the object comprises references to
representations of a second plurality of objects; and

wherein at least one object within the first plurality of objects is also within the
second plurality of objects.

9. (Currently Amended) The method of claim 8 wherein loading the first representation of the object into the computer memory when the selection is of the first rendering option comprises loading representations of the first plurality of objects into the computer memory when the selection is of the first rendering option.

10. (Currently Amended) The method of claim 9 further comprises:
loading the second representation of the object into the computer memory when the selection is of the second rendering option; and
rendering the object for the frame of animation using the second representation of the object when the selection is of the second rendering option;
wherein the second representation of the object is not loaded into the computer memory when the selection is of the first rendering option.

11. (Original) The method of claim 9
wherein the one object comprises a geometric object; and
wherein the first representation of the object comprises a geometric description of the geometric object.

12. (Previously Presented) The method of claim 9
wherein the one object comprises a camera object; and
wherein the first representation of the camera object comprises data selected from the group consisting of: camera field of view, camera position, camera orientation, camera aspect ratio.

13. (Previously Presented) The method of claim 9
wherein the one object comprises a light object; and
wherein the first representation of the light object comprises data selected from the group consisting of: type of light source, light color, light source, light quality, light shape.

14. (Currently Amended) A computer program product for a computer system including a processor ~~comprises~~ and a program memory, the computer program product comprising:

code that directs the processor to retrieve scene descriptor data associated with the frame of animation into the program memory, wherein the scene descriptor data specifies at least one object, wherein the object is associated with a first representation of the object, wherein the first representation of the object is associated with a first rendering option, wherein the object is associated with a second representation of the object, wherein the second representation of the object is associated with a second rendering option;

code that directs the processor to determine a selection of the first rendering option or the second rendering option;

code that directs the processor to query a database external to the computer system for the first representation of the object when the selection is of the first rendering option;

code that directs the processor to receive the first representation of the object from the database external to the computer system when the selection is of the first rendering option;

code that directs the processor to load the first representation of the object into the program memory when the selection is of the first rendering option; and

code that directs the processor to rendering ~~ing~~ the object for the frame of animation in response to the first representation of the object when the selection is of the first rendering option;

wherein the first representation of the object is not loaded into the program memory when the selection is of the second rendering option;

wherein the codes reside on a tangible media;

wherein the first representation of the object comprises references to representations of a first plurality of objects;

wherein the second representation of the object comprises references to representations of a second plurality of objects; and

wherein at least one object within the first plurality of objects is also within the second plurality of objects.

15. (Currently Amended) The computer program product of claim 14 wherein code that directs the processor to load the first representation of the object into ~~computer the~~ the program memory when the selection is of the first rendering option comprises code that directs the processor to load representations of the first plurality of objects into ~~computer the program~~ memory when the selection is of the first rendering option.

16. (Currently Amended) The computer program product of claim 15 further comprising
code that directs the processor to load the second representation of the object into the program memory when the selection is of the second rendering option; and
code that directs the processor to rendering the object for the frame of animation in response to the second representation of the object when the selection is of the second rendering option.

17. (Original) The computer program product of claim 16
wherein the object comprises a geometric object;
wherein the representations of the first plurality of objects comprise a plurality of geometric primitives.

18. (Previously Presented) The computer program product of claim 16
wherein the object comprises a camera object; and
wherein the representations of the first plurality of objects includes properties selected from the group consisting of: camera field of view, camera position, camera orientation, aspect ratio.

19. (Original) The computer program product of claim 16
wherein the object comprises a light object; and
wherein the representations of the first plurality of object includes properties selected from the group: type of light source, light color, light source, light quality, light shape.

20. (Original) The computer program product of claim 16

wherein the first representation of the object further comprises values for properties of objects in the first plurality of objects.

21. (Previously Presented) The method of claim 3

wherein the geometric description of the geometric object includes a plurality of geometric parameters; and

wherein the scene descriptor data includes values for the plurality of geometric parameters.

22. (Previously Presented) The method of claim 4

wherein the first representation of the camera object includes a plurality of camera parameters; and

wherein the scene descriptor data includes values for the plurality of camera parameters.

23. (Previously Presented) The method of claim 5

wherein the first representation of the light object includes a plurality of light parameters; and

wherein the scene descriptor data includes values for the plurality of light parameters.
